"The putative arthritogenic cationic 19-kilodalton antigen of "The putative arthritogenic cationic 19-kilodalton antigen of Yersinia enterocolitica is a urease beta-subunit."; Infect. Immun. 61:2498-2504(1993).

-I- CARALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).

-I- COPACTOR: Binds 2 nickel ions per subunit (By similarity).

-I- SUBUNIT: (ALPHA, BETA, GAMMA)(3) (BY SIMILARITY).

-I- PTM: Ly6-221 is carbamylated. The carbamoyl group provides ligands for the two nickel ions (By similarity).

-I- SIMILARITY: BELONGS TO THE UREASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAIN=A2635 / Serotype O:8;

THIS RECEPTOR FOR PROSTAGLANDIN E2 (PGE2). THE ALTER OF STATE BY G-S PROTEINS THAT STIMULADENYLATE CYCLASE. HAS A RELAXING EFFECT ON SMOOTH MUDELAY AN IMPORTANT ROLE IN REGULATING REMAL HEMODYNAMIL INTESTINAL EPITHELIAL TRANSPORT, ADRENAL ALDOSTERONE INTESTINAL FUNCTION.

AND UTERINE FUNCTION.

J. SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: HIGH IN INTESTINE AND IN PERIPHER.

"Identification of a divergent M protein gene and an M protein-rel
gene family in Streptococcus pyogenes serotype 49.";
J. Bacteriol. 171:6397-6408(1989).
-i- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan
an anide bond (Potential).
-i- SIMILARITY: BELONGS TO THE M PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-AUG-1990 (Rel. 15, Creat

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
